

Scientific Name

Common Names

Watershed

Ecosystem
Habitats

How do I identify it?

Insert a photograph or diagram that points out the key characteristics used to identify your species.

List 3-5 of the key characteristics you use to identify your species. What makes it different from other species?

Where does it live?

Insert a photograph or drawing of the type of habitat your species prefers.

Describe your species preferred habitat. Include the resources it gets from its habitat.

How does it grow and change?

Insert a diagram that shows the different stages or cycles your species goes through during its life.

How is it adapted to life in Maine?

Insert a photograph or sketches that show how your species is adapted to life in Maine.

List 3-5 ways your species is adapted to life in Maine. How is adapted to find food, defend itself, survive seasonal change, reproduce, etc.?

What does it eat? What eats it?

Insert a food chain or food web that shows what your species eats, and what eats your species.

Explain where your species fits in the food chain. List your species favorite prey and its most relentless predator.

What do scientists want to know?

List 1-2 questions that scientists are currently researching or want to know about your species.

How is it connected to humans?

Explain both positive and negative ways that your species interacts with, influences, or is influenced by the human communities with which it shares the watershed.
